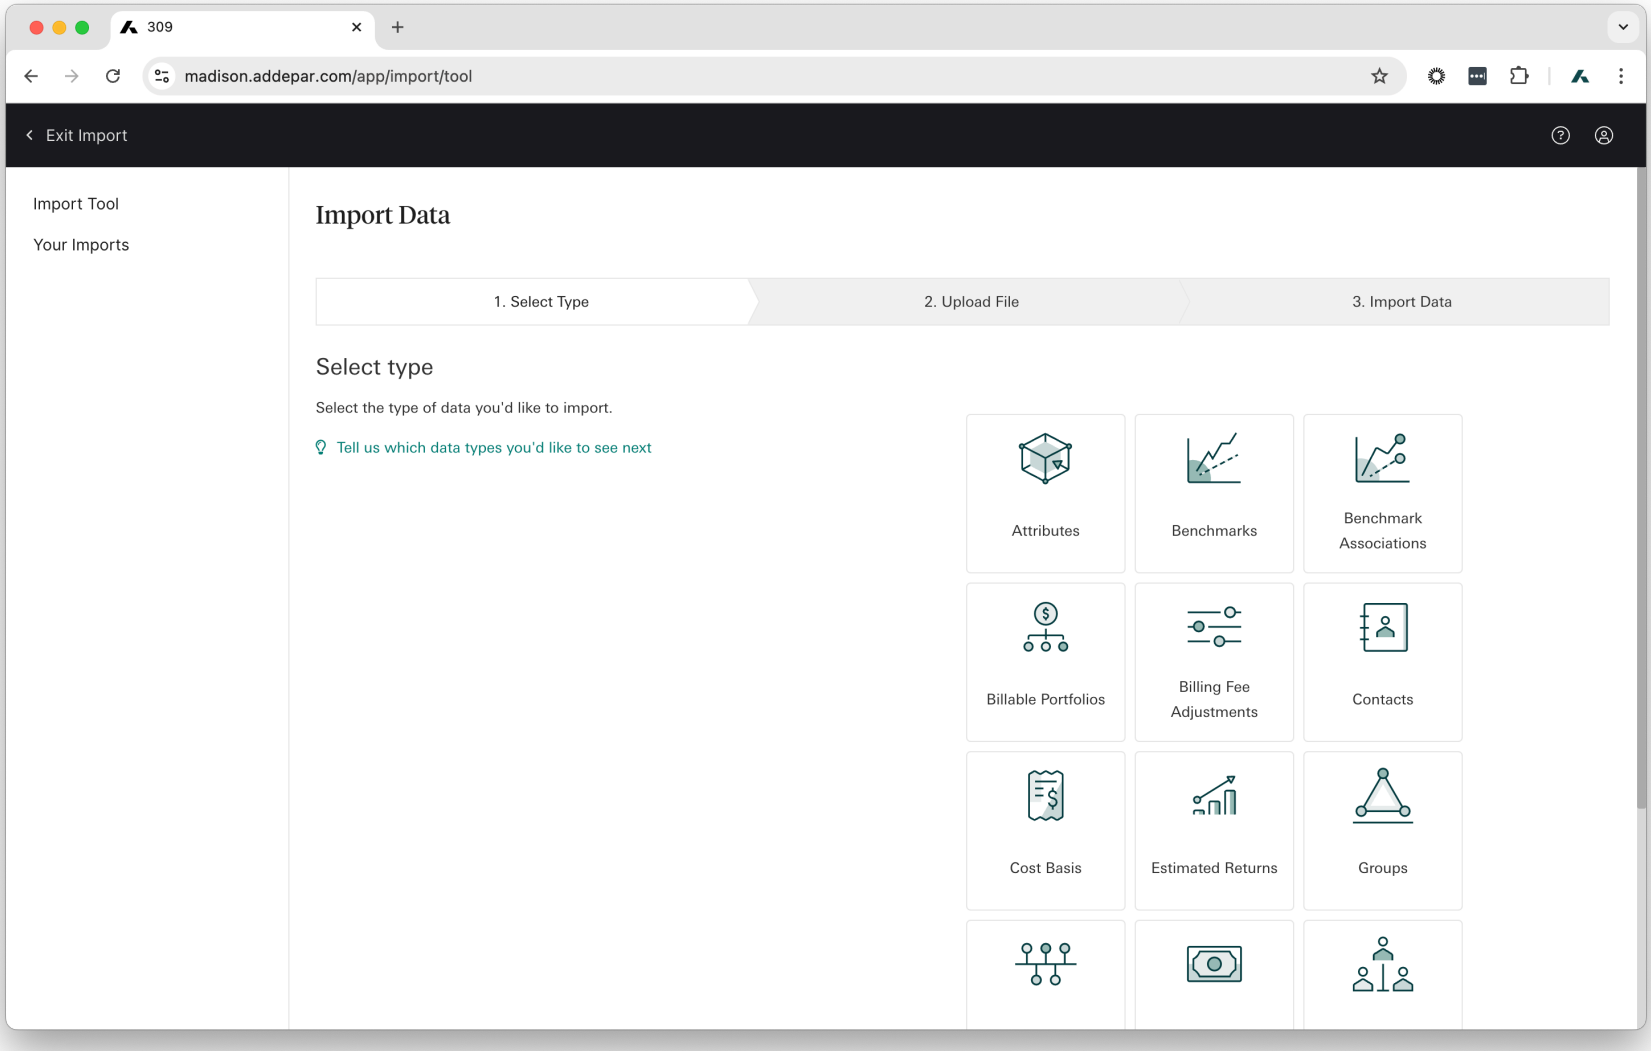
About importing data

1 month ago · Updated

Follow

Importing data is helpful when onboarding a new client portfolio or managing data that's not available via a portfolio data feed.



In this article:

- Required permissions
- Available guides
- Best practices
- Troubleshooting

- View import history

Required permissions

To import data, you must have permission to access the in-app Import Tool. You also need access to the relevant portfolios and import types. For example, if you want to import transactions for two clients, then you need permission to edit transactions as well as portfolio access for those two clients. If you regularly have to import data across all portfolios, then it's best practice to have access to all current and future portfolios.

To modify data from a portfolio feed, you will need permission to edit online data.

To view your own import history, you can navigate to the Your Imports tab in the in-app tool. Viewing import history at a firm level is a separate permission.

Available guides

You can import a variety of data. Follow the guides below.

- Attribute values
- Benchmarks
- Benchmark associations
- Billable portfolios
- Billing fee adjustments
- Constituents
- Contacts
- Cost basis
- Estimated returns

- Groups
- Historical prices
- Investments
- Ownership structure
- Report access
- Summary data
- Target allocations
- Total outstanding shares
- Transactions (create, edit)
- Transactions (delete)
- Valuations and snapshots
- Values and flows

Best practices

There are a few things to keep in mind when importing data.

Columns

The data you want to import determines which columns and values you need to include in your spreadsheet. Every spreadsheet must have a column to identify the entity you're creating or updating. For position-level data, your spreadsheet must also include a column to identify the asset owners. In addition to required columns, you can add additional, optional columns to model and describe your data more completely .

It's important that you format column headers correctly. Before importing your spreadsheet, verify that the column headers are spelled correctly and contain the correct amount of spaces and characters. For example, "OwnedID" will cause an error because it's missing a space—the header must be "Owned ID". Using the spreadsheet templates we provide helps avoid these errors.

Typos

Be mindful of any errors and always double-check your work. For example, when importing a contribution, you'll see an error if you enter "Contributions" as the transaction type—it should be "Contribution" singular.

Dates

- **From Excel**: We'll use the date formatting from Excel.
  - *Example:* You enter 11-04-2024 (MM-DD-YYYY) in Excel (November 4, 2024). If your firm's default is DD-MM-YYYY, we'll display it as 04-11-2024 in Addepar (November 4, 2024).
- **From CSV**: The date must already be in your firm's default format.
  - *Example:* You enter 11-04-2024 in a CSV, and your firm uses DD-MM-YYYY. Addepar will interpret this as April 11, 2024, not November 4, 2024.

Run a test import

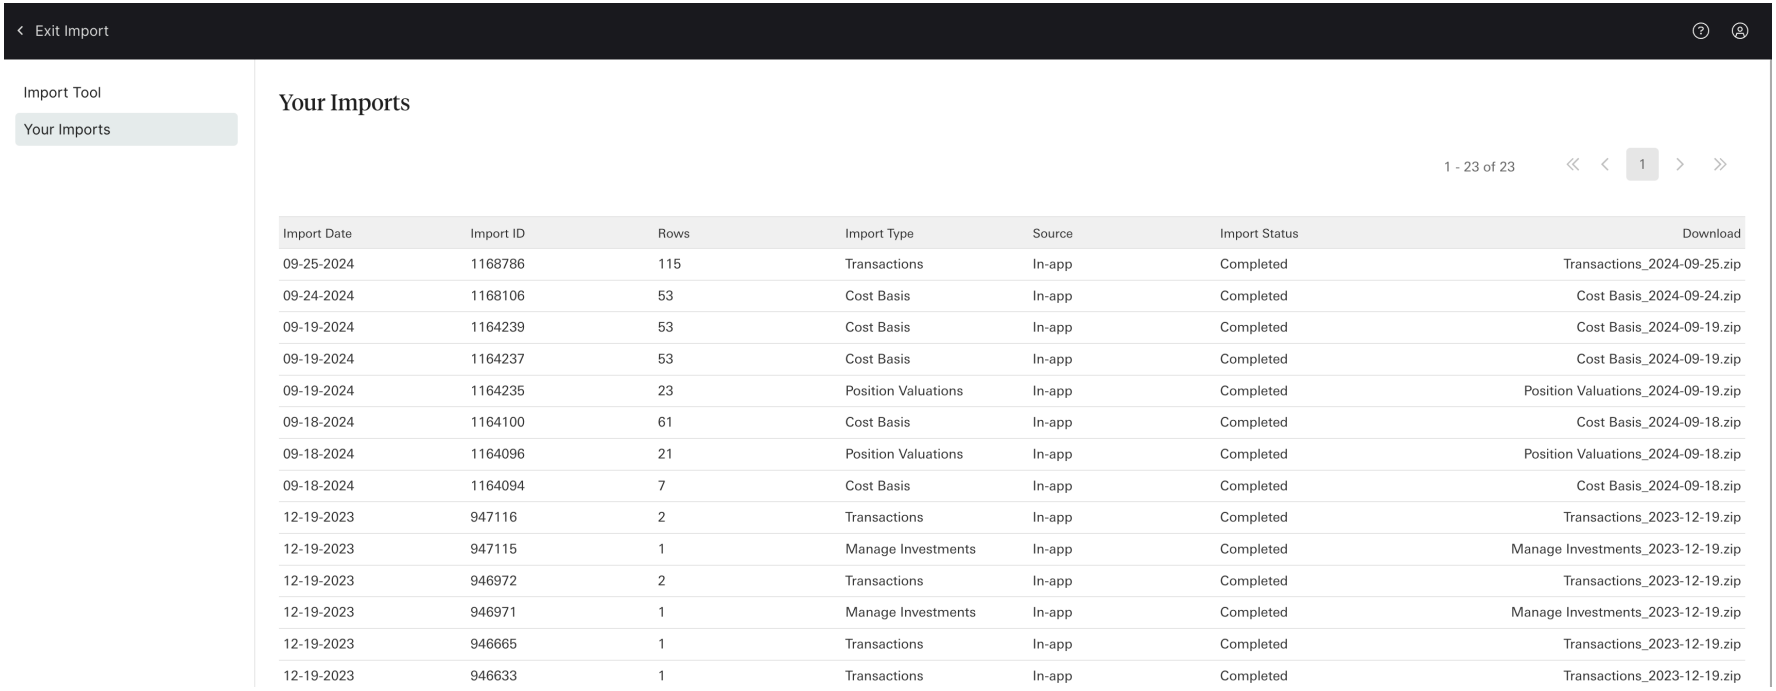
If you're new to importing data in Addepar, consider importing only one or two rows of data at first as a test. This helps you get familiar with the process. Also, if there are any issues, you'll only have to correct those one or two rows rather than the full data set.

Troubleshooting

The most common issues with data importing are related to typos and formatting. Check the column headers and date formats. Also check that all required fields are filled in, and that there aren't any duplicate rows.

View import history

To view your import history, go to **Import Tool > Your imports**.



Import Date	Import ID	Rows	Import Type	Source	Import Status	Download
09-25-2024	1168786	115	Transactions	In-app	Completed	Transactions_2024-09-25.zip

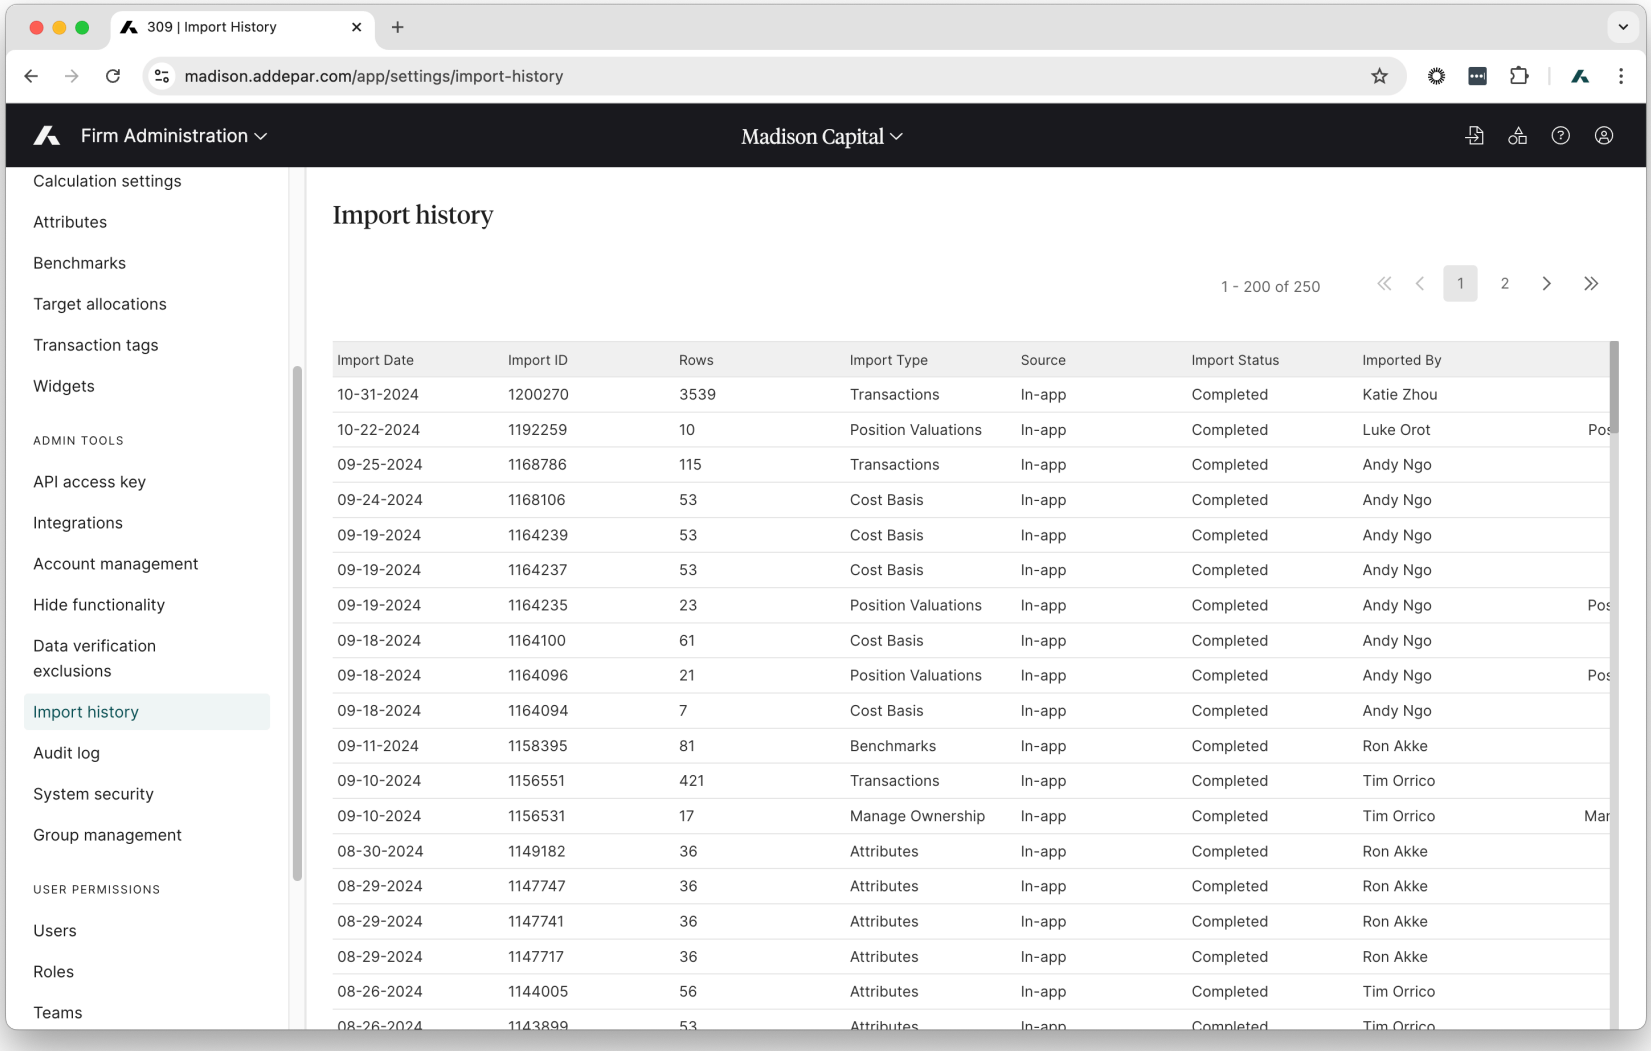
If you have permission to view import history across your firm, then go to **Firm Administration > Import history**. You'll see everyone at your firm who imported data, what they imported, and when.



Import Date	Import ID	Rows	Import Type	Source	Import Status	Imported By
10-31-2024	1200270	3539	Transactions	In-app	Completed	Katie Zhou

Each entry in the history represents a single import. You'll see the import date, ID, number of rows imported, type of data imported, and the name of the user who did the import.

To see the data in more detail, you can click the entry. This will download a zip file with the original spreadsheet you imported, plus a spreadsheet that lists any new entities you created, including their entity IDs.
