Read time: 8 min

Tailor all aspects of the look and feel of your reports. From organizing sections and adjusting layouts to formatting tables, charts, and more.

In this guide:

- Manage a report
  - Change a report's paper size
  - Duplicate a report
  - Delete a report
- Use sections
  - Add a section
  - Remove a section
  - Hide empty sections from PDFs

    - Save sections to the template library
- Manage headers and footers
    - Edit headers and footers
- Edit a section's layout
    - Update a report's orientation
    - Add and arrange elements in a report
- Format tables
    - Use a pre-designed table theme
    - Style a table
    - Use custom formatting
    - Style rows
    - Wrap body text
    - Customize columns
    - Hide or show columns
    - Change how rows look
    - Organize rows with groupings
    - Sort rows
- Manage charts
    - Change the chart in a report
- Troubleshooting
- More options

Before you begin

- You need permission to complete these workflows.

There are several ways to edit a report, depending on your goal. For quick changes, simply open the report in the **Report Editor > Make your changes > Click Save**.

If you need to make specific changes, use these workflows to customize your reports.

Manage a report

Change a report's paper size

1. Go to **Analysis & Reporting** > Search a portfolio.
2. On the **Reports** tab, click the **three-dot menu** next to the desired report.
3. Click **Settings** and choose the new paper size you want.
4. Click **Save**.

Tip: You can also change a report's paper size in the **Report Editor**. Just click **Settings** in the toolbar.

Important:

- Double-check the report's formatting after changing the paper size. Any previously added elements might need to be adjusted manually.
- Be careful when changing a report's paper size after you've linked sections. This action will unlink them from your report and convert them to custom sections.

Duplicate a report

1. Open the report you want to duplicate.
2. In the **Report Editor**, click **Save As** in the toolbar.
3. **Name** your new report.
4. Click **Create**.

Note: The new report will automatically be linked to the same portfolios as the original. You can change which portfolios are affiliated to the new report in **Settings** (see toolbar).

Delete a report

1. Go to **Analysis & Reporting** > Search a portfolio.

2. On the **Reports** tab, click the **three-dot menu** next to the desired report.
3. Click **Delete**.

Important: This action is permanent and cannot be undone. Deleting a report removes it from all affiliated portfolios. Previously generated reports will still be available in the **Generated PDFs** tab.

Use sections

Reports are made of sections. Each section you add, builds another block to your structure—or report. You can add pre-made sections with a template or create custom ones.

Add a section

1. Open a report in the **Report Editor**.
2. Click the **+** sign in the lower left-hand corner of the outline panel.
3. Search or browse for a section template. Or create your own.
4. **Drag and drop** the section in the outline panel to where you want it to appear in the report.
5. Click **Save**.

Remove a section

1. Open a report in the **Report Editor**.
2. **Hover** your mouse over the section you want to remove in the outline panel.
3. Click the **X** that appears in the top right corner.
4. Click **Save**.

Note: If your firm requires this section, the X won't appear.

Hide empty sections from PDFs

You can opt to hide sections without portfolio data in the PDF version of a report. This creates a cleaner, more put-together look for your clients.

1. Open a report in the **Report Editor**.
2. Click the **section** you want to edit to open the right-side panel.
3. Under **Visibility**, choose whether to show or hide this section in the PDF if there's no data.
4. Click **Save**.

Tip: You can see if a section will be hidden for a selected portfolio. Just look for a line through its title in the outline panel.

Save sections to the template library

Saving sections to the Template Library lets you reuse them across multiple reports. This saves you from having to recreate the same layout, formatting, and content every time you need it.

1. Open a report in the **Report Editor**.
2. Click the section you want to save to open the right-side panel.
3. Scroll to the bottom of the panel and click **Copy to Template Library**.
4. Enter a **name** and choose **firm or team access**.
5. Click **Create**.

Tip: The first time you save a page or section as a template, it won't automatically update in your current report. You'll need to remove the original page or section and then add the new template version from the library.

Remember: You can also unlink sections to make specific changes to that report. Again, any changes made to an unlinked section won't automatically apply to other reports.

Manage headers and footers

You can add text, images, or page numbers to headers and footers and adjust their spacing. You can also edit their names and access levels.

Edit headers and footers

1. Open a report in the **Report Editor**.
2. Double-click on the **header** or **footer** you want to edit.
3. Make your changes directly to the report or adjust settings in the right-side panel.
4. Click **Save**.

Edit a section's layout

There are two ways to adjust a section's layout:

- **Orientation:** Choose between a landscape (wide) or portrait (tall) layout.
- **Element location:** Move text, tables, charts, or images once added.

Update a section's orientation

1. Open a report in the **Report Editor**.
2. Click the **section** you want to edit to open the right-side panel.
3. Under Orientation, choose **Landscape** or **Portrait**.
4. Click **Save**.

Add and arrange elements in a page

1. Open a report in the **Report Editor** and click the section you want to edit.
2. Use the **toolbar** to add your elements (text, table, chart, shape, or media).
3. Click the element to edit its appearance, data, or layout.

4. Once added, **drag and drop** the element(s) to your desired location(s).
    1. **Tip:** You can resize your elements, too.
5. Click **Save**.

Format tables

Use a pre-designed table theme

You don't have to change every detail of a table's design manually. Instead, you can apply a pre-made theme with defined styles. This is especially useful if you have many tables to format or need to create reports quickly.

First, you'll want to create your table theme, and then add it to your report.

Create a pre-designed table theme

1. Go to **Firm Administration** > **Report settings**.
2. On the **Table themes** tab, click **+Create theme**.
3. Enter a **name** and choose the style and formatting for your **title** and **rows**.
4. Click **Save**.

Once you save a table theme, it will be available to use in your reports. You can create table themes to reflect team or regional branding.

Use a pre-designed table theme

1. Open a report in the **Report Editor**.
2. Click the **table** you want to edit to open the right-side panel.
3. On the **Format** tab under **Table theme,** choose a style from the dropdown.

Style a table

Before you can style your tables, you'll first need to change your formatting. As a note, we recommend using your firm's default or pre-designed table themes when you can.

Use custom formatting

1. Open a report in the **Report Editor**.
2. Click the **table** you want to edit to open the right-side panel.
3. On the **Format** tab under **Table theme**, choose "**Use custom formatting.**"

Once you're using custom formatting, you can style the text in specific rows. You can also wrap long body text so it always fits inside the table.

Style rows

1. On the **Format** tab, choose the section for the row type you want to style.
2. Change the text weight, size, alignment, or color.

Wrap body text

1. On the **Format** tab under **Body rows**, check the box to enable text wrapping. This ensures that long text fits inside the table.

Customize columns

You can use the **Report Editor** to change how your tables look. That includes renaming columns and making your text bold for emphasis.

1. Open a report in the **Report Editor**.
2. Click the **table** you want to change to open the right-side panel.
3. On the **Format** tab under **Column format**, choose the column you want to rename.

4. Under **Custom label**, select **Custom** and enter a new **name**.
5. Click **Save**.

Hide or show columns

1. Open a report in the **Report Editor**.
2. Click the **table** you want to edit to open the right-side panel.
3. On the **Format** tab under **Column format**, choose the column you want to edit.
4. Under **Custom visibility**, select an option from the dropdown.
5. Click **Save**.

Note: Columns with $0.00 or 0.00% are not considered empty and won't hide automatically.

Change how rows look

You can use the **Report Editor** to customize how rows appear in a table. First turn on custom formatting so you can make your changes.

1. Open a report in the **Report Editor**.
2. Click the **table** you want to edit to open the right-side panel.
3. On the **Format** tab, you can change how different kinds of rows look:
   1. Header row (top row): Change the text and add or adjust borders.
   2. Body rows (regular rows of data): Change and wrap text in cells.
   3. Subtotal and Total rows (rows that show sums or totals): Style the text, borders, and row colors. Note: You'll style these separately.
4. Click **Save**.

Organize rows with groupings

1. Open a report in the **Report Editor**.
2. Click the **table** you want to edit to open the right-side panel.
3. On the **Table** tab under **Groupings**, add or remove groupings.

4. **Drag and drop** groupings to organize your rows.
5. Click **Save**.

You can expand or collapse these table groupings to show or hide details.

Sort rows

1. Open a report in the **Report Editor**.
2. Click the **table** you want to edit to open the right-side panel.
3. On the report, click the gear icon in a column header.
4. Choose to sort by:
    1. Ascending = A to Z, smallest to largest
    2. Descending = Z to A, largest to smallest
    3. Apply default = reverts back to the original order
5. Click **Save**.

To sort by groupings: Click the **gear icon** > choose **Sort groupings** > select how you want to sort.

Manage charts

Change the chart in a report

You may want to change the chart in a report to show different kinds of information. Maybe to emphasize a particular point or make the data easier to understand. Whatever the case, we've got you covered.

Change the chart in a report

1. Open a report in the **Report Editor**.
2. Click the chart you're currently using to open the right-side panel.
3. On the **Data** tab under **Table**, choose a new **Chart Type** from the dropdown.
4. Optional: Adjust the settings for your new chart, such as:

   1. Add or remove data the chart shows
   2. Change how the data is grouped or filtered
   3. Change the chart's title, axis labels, colors, or legends
5. Click **Save**.

Note: If you change a chart in a section template, it will update in all reports using that template.

Troubleshooting

Getting stuck? Find the answers you need to fix common issues with reporting.

- Why doesn't my table data match my analysis views?
- When I edit a table, all my data is missing.
- Why can't I delete a section template?
- Why did my report fail to run?
- Why won't my headers and/or footers save?
