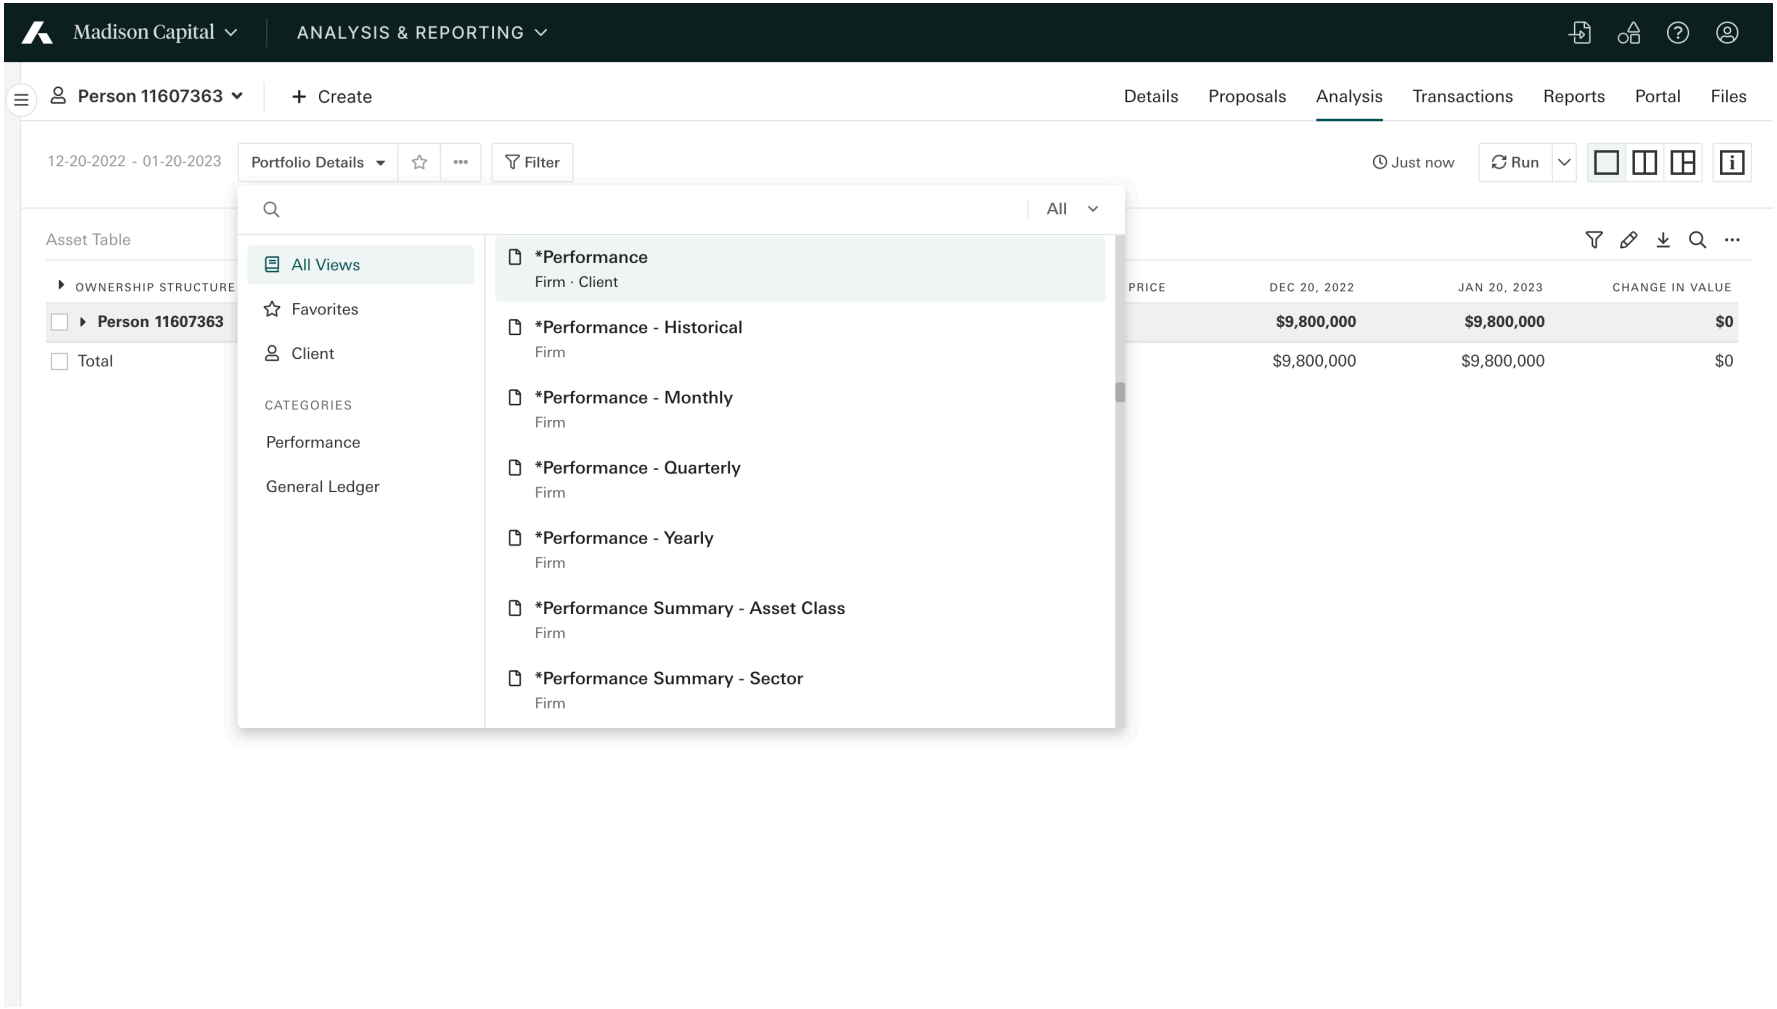
- Edit the view settings
- Configure the table
- Run analysis
- Display charts
- Filter data
- Save your changes
- Edit view settings
- Set a view as a favorite view
- Set a view as a team view
- See row details
- Copy and paste charts and tables
- Download chart and table data

- Manage views

The **Analysis** tab is where you can analyze portfolio performance at any level. Information in Analysis is presented as views, and every view contains an asset table and up to two charts.



Addepar comes with a collection of built-in views available under Firm Views. Firm views are available to everyone at your firm, whereas personal views are only visible to you. Personal views are ideal for aggregating data specific to your needs, or to test various view configurations.

Remember that only portfolios can be opened in **Analysis**, not investments. This is because Addepar analyzes investments in the context of the portfolio in which they're held.

> ***Note:*** *You must have permission to access the* ***Analysis*** *tab.*

# Edit the view settings

To edit a view's settings, click the ellipsis button next to the view name and select **Edit View Settings**. From here, you can edit the view's name, assign it to a category, and enter a custom description that will appear in the view dropdown. You can also configure various general settings including:

- **Default time period.** Set the view to run on a default time period upon navigating to it.
- **Hide previous holdings.** Select to remove assets that are no longer held.
  Important: Hiding previous holdings does not remove them from performance calculations. To remove the holdings from the calculations, add a filter for Holding Status and select the current holding option.

- **Group by historical values.** Select to view both past and present values of a position for which historical values have been assigned with time-varying attributes. If unselected, each asset will display as though it's maintained its current value throughout history.

- **Multiple-value attributes.** Choose whether to not group by multiple-value attributes, calculate Value and % of Portfolio using the weights of multiple-value attributes, or use the weights of multiple-value attributes and display any remainders. Only one multiple-value attribute can be used as a grouping in each table.

- **Look through composite securities.** Select to view composite securities like funds from the perspective of a legal entity. All assets underlying a composite will be shown, and the value of the composite is displayed as the total value of the underlying assets, adjusted for ownership percentage.

- **Display account fees.** Select to include fees that are charged on the account level. Account fees are not displayed by default, but are included in performance calculations.
- **Display error explanations.** Select to see an icon when Addepar fails to calculate a value. Clicking the icon will show a pop-up with a more detailed explanation of why the calculation failed.
- **Collapse all rows.** Select to collapse each grouping by default.
- **Show pivot table total column.** Decide whether the "Total" column is displayed or hidden in pivot tables. This setting is turned on by default.
- **Use settlement dates for tax lots.** This setting makes tax-based metrics use Settlement Date rather than Trade Date. Learn more
- **Short held assets.** Indicate how values for short held assets are displayed. An asset is considered "short held" if it is not held at the beginning of the configured period. For example, an asset purchased this week will be considered short held for a 10 Year IRR calculation. The options for this setting are:
  - Display best value possible: Shows the value with no formatting differences, with no indication that the value refers to a short held asset.
  - Display best value possible, annotate with †: Calls out short held assets by annotating them with the † symbol.
  - Do not display value: Hides the result of calculations that cannot be computed over the full time period.
  - Use firm-wide settings: Matches your firm's default preference of the three options above.

- **Summary data preference.** Select how summary data is used in calculations and how summary data is annotated.

  - **Default to live data.** If no summary data is found for the calculation, show the result of the calculation based on transactional data.

  - **Never default to live data.** If no summary data exists for a calculation, a blank is shown.

- **Display wrapped entities.** If checked, ignore the wrapper status of accounts and legal entities in this view, showing all underlying entities no matter what.
- **Target allocation reference level.** Select the logic by which the allocation model is chosen for all groups and columns across the entire view. The options for this setting are:
  - Lowest ownership: Start at the bottom of the ownership structure and move up until an allocation that matches the model is found, then apply that to all target allocation attributes in the view.

- Selected entity: Always applies the target allocation assigned to the entity currently selected for the view.
- Respect groupings: Rather than moving up the ownership structure, start at the bottom of the grouping hierarchy and move up until a grouping with a matching target allocation is found, then apply that to the view.

# Configure the table

You can organize the table by groupings that can be expanded or collapsed. You can also add and arrange columns to show important details side-by-side.

1. Click **Edit** in the top right corner of the table. A new window will appear.
2. Edit the table, as needed.
   - Add or remove groupings to organize rows in the table.
   - Add or remove columns, which can display any attribute. You can reorder columns by dragging and dropping them, or edit existing columns by clicking on them.
   - Add or remove benchmarks to compare the portfolio to relative performance. Benchmarks will be listed at the bottom of the table.
3. Click Apply.

You can also sort the asset table in two different ways:

- Click the gear icon in a column's header, then click **Sort ascending**, **Sort descending**, or **Apply default sort** to sort the table based on that column.
- Click the gear icon in a column's header, then click **Sort groupings** to apply sorting logic within groupings. You can choose from attributes included in the table, or click **Other attribute** to sort by any attribute.

Note that the asset table is displayed by default, but you can switch to an advanced table or pivot table. The advanced table is useful for analyzing changes in metrics over multiple time periods.

To change the time period of data shown, click the start and end dates directly beneath the portfolio name. This will update columns that reflect the “current period," but not those configured to reflect data from a different period. For example, if columns

are configured to display end of year values for the last five years, changing the portfolio's time period will not affect that data.

# Refresh analysis

When you make changes to an analysis view, your data updates in the platform, but the changes don't appear in your view until you click **Refresh**. This helps avoid long loading times when editing a view.

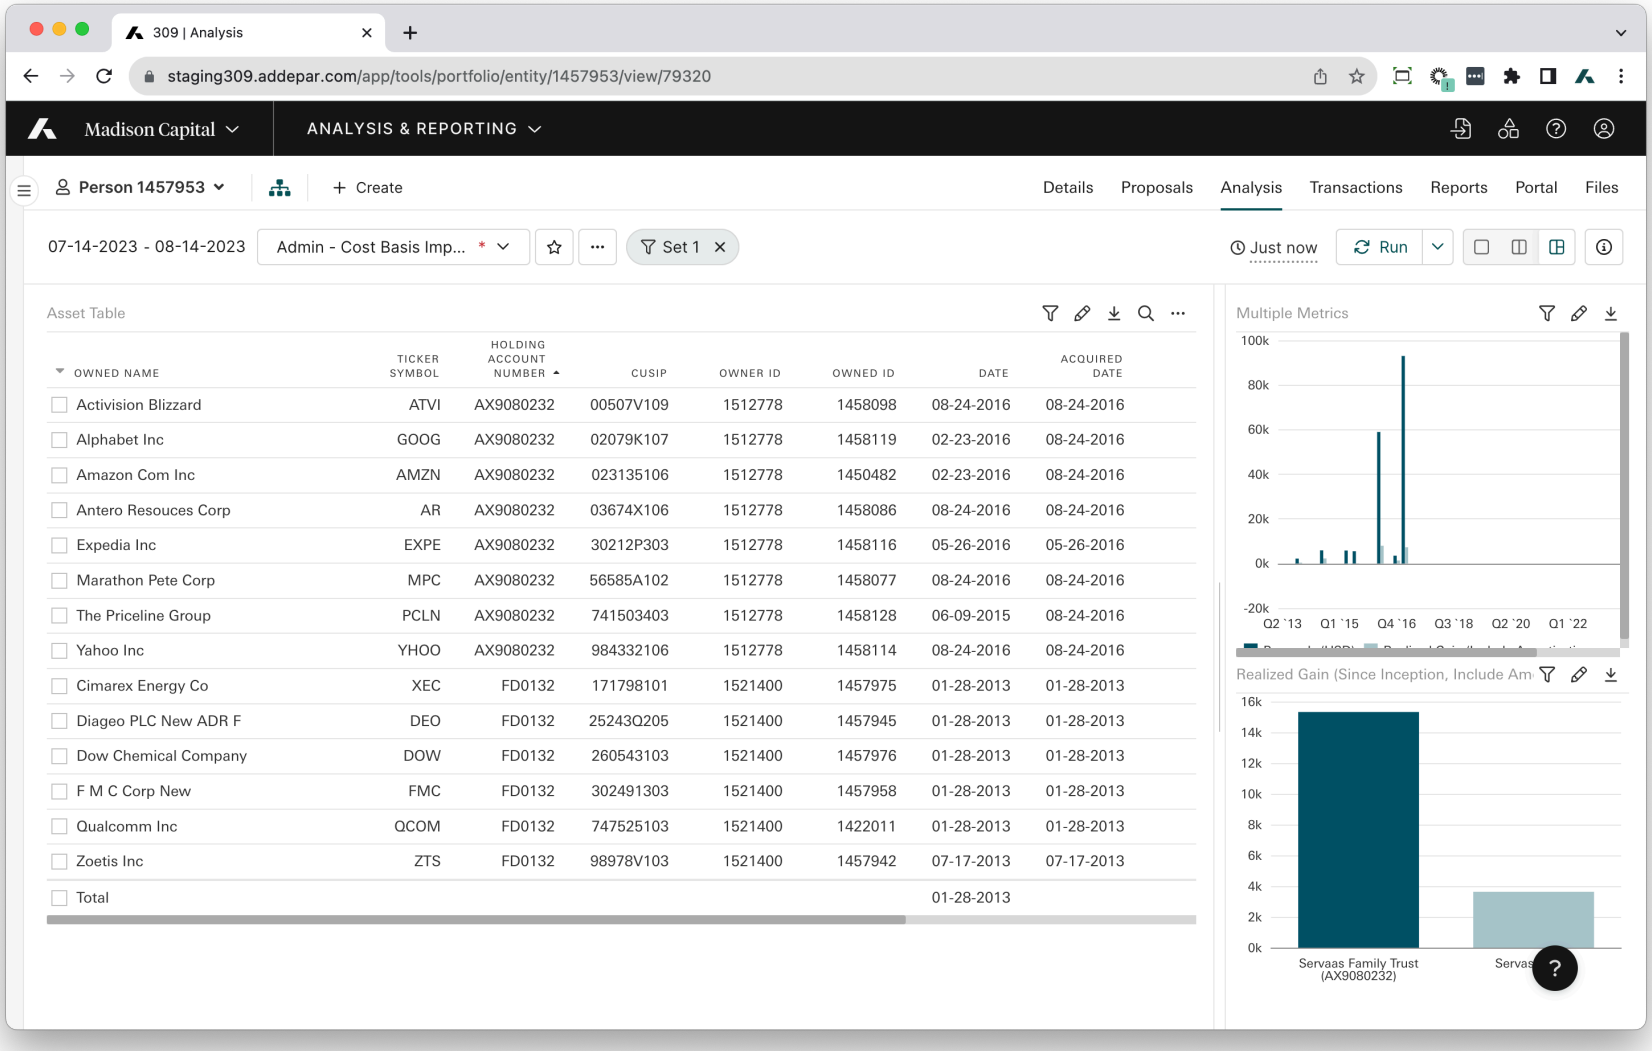
After changes have been made to a view, a blinking indicator appears next to the **Refresh** button and the **Refresh** button turns green. Click on the **Refresh** button or use the keyboard shortcut (CMD + Enter/Control + Enter) to reload the view with the latest changes. If you're still making changes to the view, you can ignore the indicator until you're ready to refresh.

After a view has been refreshed, the data is stored in the cache for the rest of the day. If you navigate to the same view and portfolio while the data is stored in the cache, the stored data will load instantly. You can stop views from loading stored data by turning off the setting in your personal settings.

Note that if you download the asset table, publish the view to reports, or generate an API URL, each action will occur with the most recent changes, even if they're not currently reflected in the view.

# Display charts

Every view can include up to two charts. Charts aren't tied to the table, which means that they can show entirely different data.

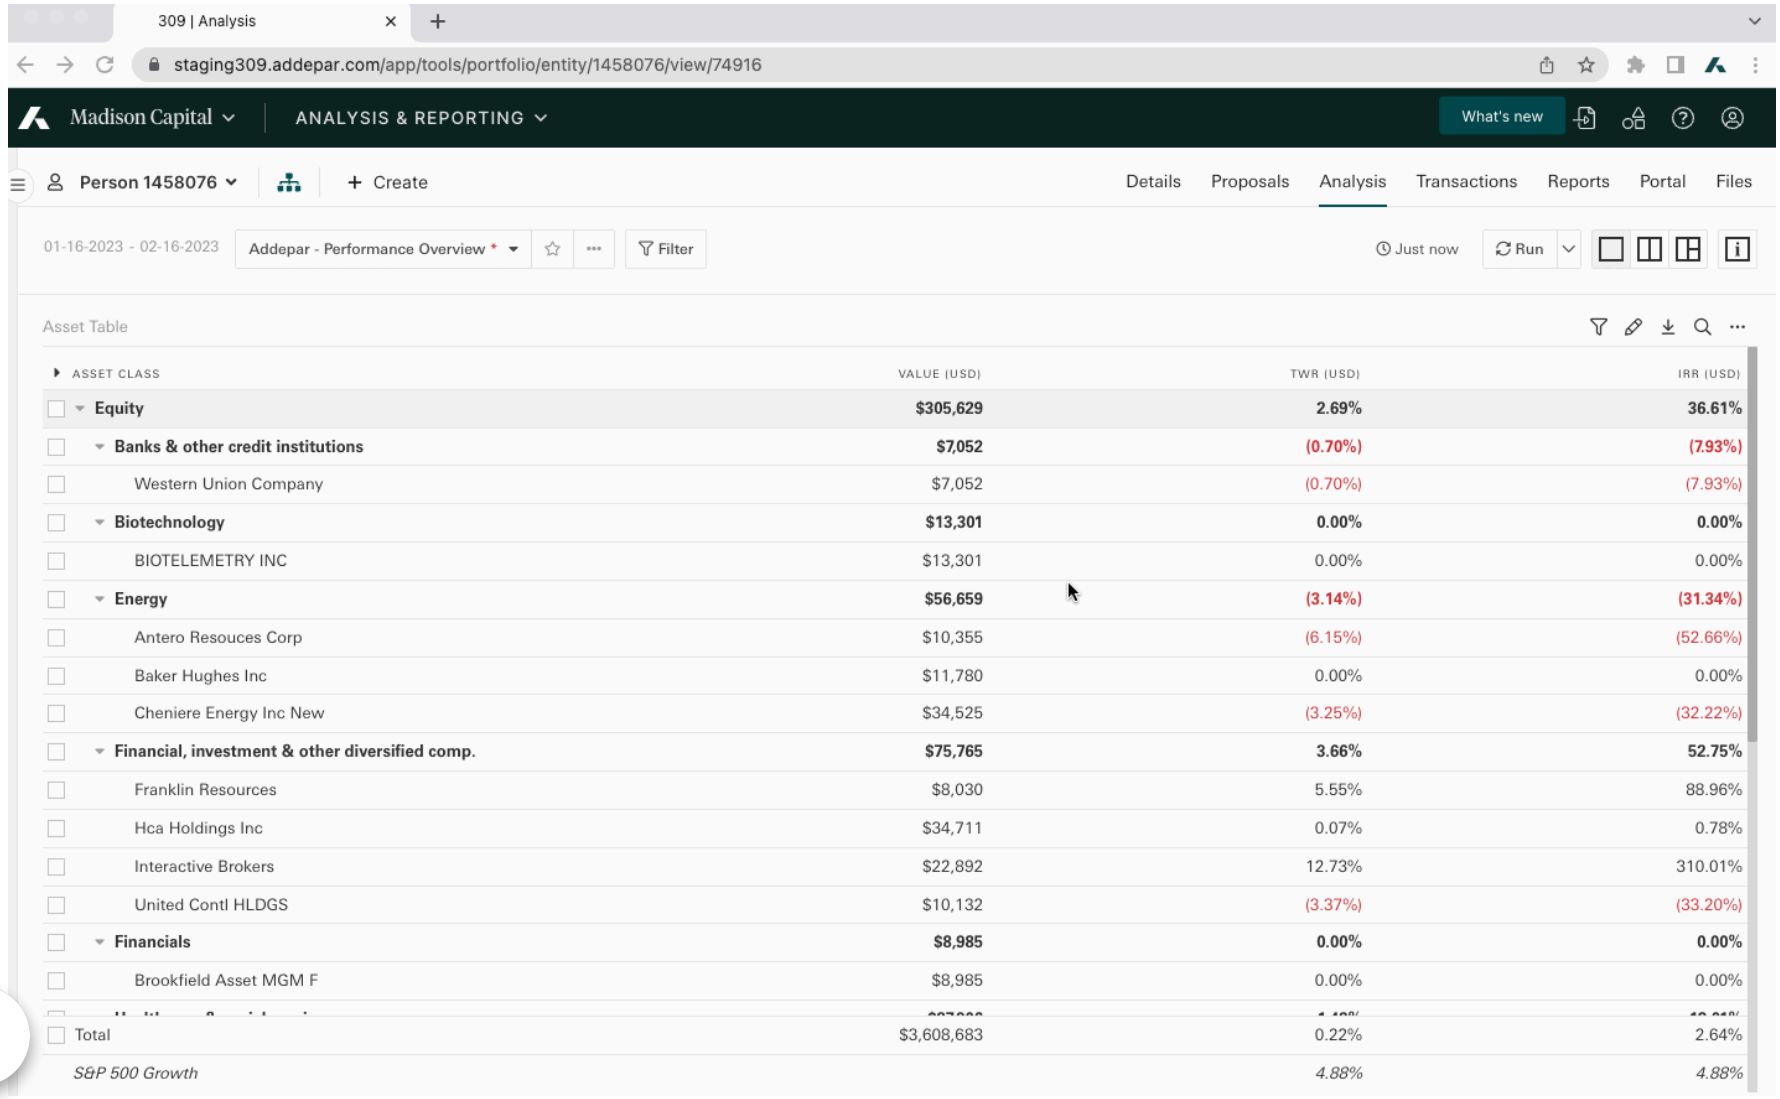


1. Click the charts button in the top right of the view.
2. Choose whether you want one or two charts.
3. Click **Edit** above the chart(s) and make the necessary adjustments. You can edit both the contents of a chart and how it's formatted.
4. Click **Close**.

To hide the charts, click the X in the top right of the charts panel.

# Filter data

To refine data in the view, you can apply filters. For example, to see only equities, you can filter by asset class.



| ASSET CLASS | VALUE (USD) | TWR (USD) | IRR (USD) |
|---|---|---|---|
| **Equity** | **$305,629** | **2.69%** | **36.61%** |
| **Banks & other credit institutions** | **$7,052** | **(0.70%)** | **(7.93%)** |
| Western Union Company | $7,052 | (0.70%) | (7.93%) |
| **Biotechnology** | **$13,301** | **0.00%** | **0.00%** |
| BIOTELEMETRY INC | $13,301 | 0.00% | 0.00% |
| **Energy** | **$56,659** | **(3.14%)** | **(31.34%)** |
| Antero Resouces Corp | $10,355 | (6.15%) | (52.66%) |
| Baker Hughes Inc | $11,780 | 0.00% | 0.00% |
| Cheniere Energy Inc New | $34,525 | (3.25%) | (32.22%) |
| **Financial, investment & other diversified comp.** | **$75,765** | **3.66%** | **52.75%** |
| Franklin Resources | $8,030 | 5.55% | 88.96% |
| Hca Holdings Inc | $34,711 | 0.07% | 0.78% |
| Interactive Brokers | $22,892 | 12.73% | 310.01% |
| United Contl HLDGS | $10,132 | (3.37%) | (33.20%) |
| **Financials** | **$8,985** | **0.00%** | **0.00%** |
| Brookfield Asset MGM F | $8,985 | 0.00% | 0.00% |
| Total | $3,608,683 | 0.22% | 2.64% |
| *S&P 500 Growth* | | *4.88%* | *4.88%* |

To apply a basic filter:

1. Click **Add Filter** next to the views dropdown.
2. Select an attribute. You can search for attributes by name.
3. Configure the filter. Choose **Inclusion** to display only assets with the selected values, or **Exclusion** to remove assets with those values.
4. Click **Finish**.

The new filter will appear next to the name of the view. To edit the filter, simply click it and make the adjustments. After a filter has been applied, click **Add OR Group** to make the filter an "or" statement. To delete a filter, click the X next to its name. Combinations of filters can be saved as a Filter Set to be quickly reused and edited across different views.

Filters can also be applied to an individual column by clicking the gear icon in the column's header, then clicking Filter Column.

Learn more about how filters work in Analysis

# Save your changes

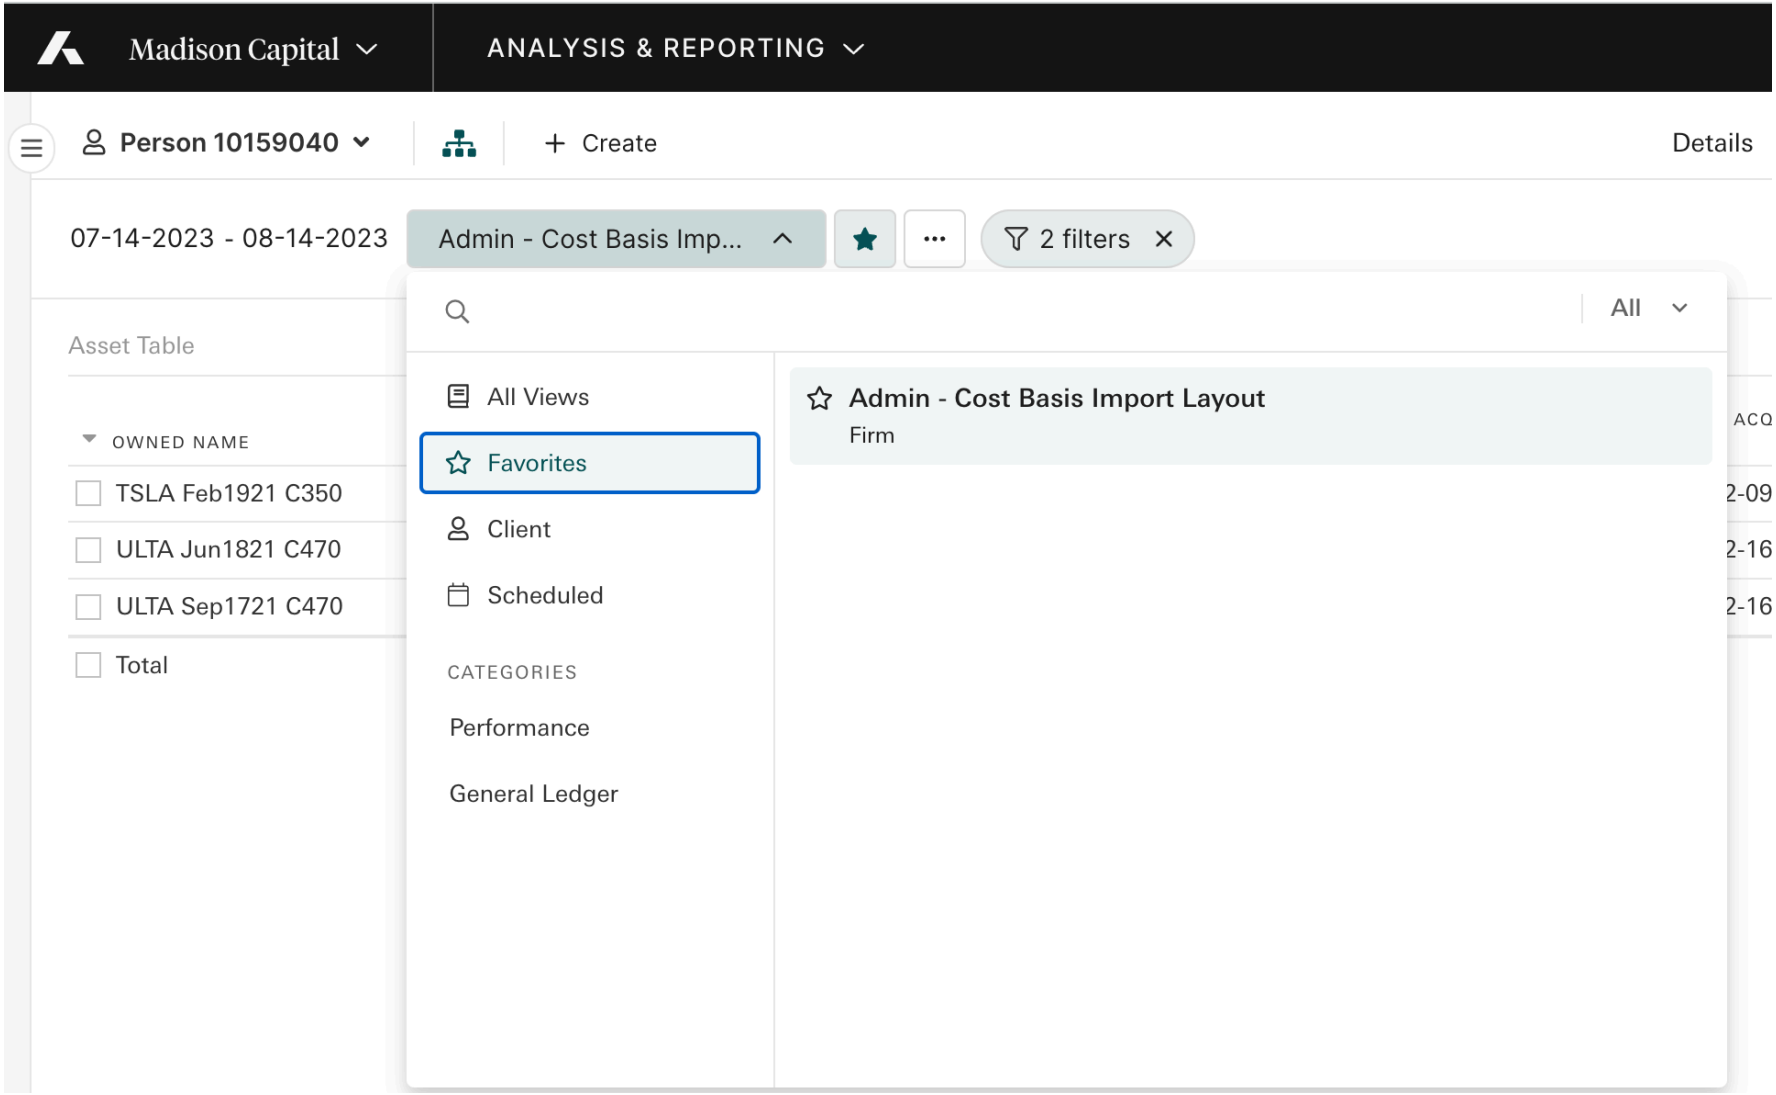
When you're done editing a view, click the ellipsis icon next to the view name and select:

- **Save** to save your changes directly to the original view
- **Save As...** to create a new view based on your changes
- **Save to Report** to add the table to a report

New views will be added to the view dropdown.

# Set a view as a favorite view

To easily access particular views, you can set them as your favorites. Only you can see which views you have set as favorite views.



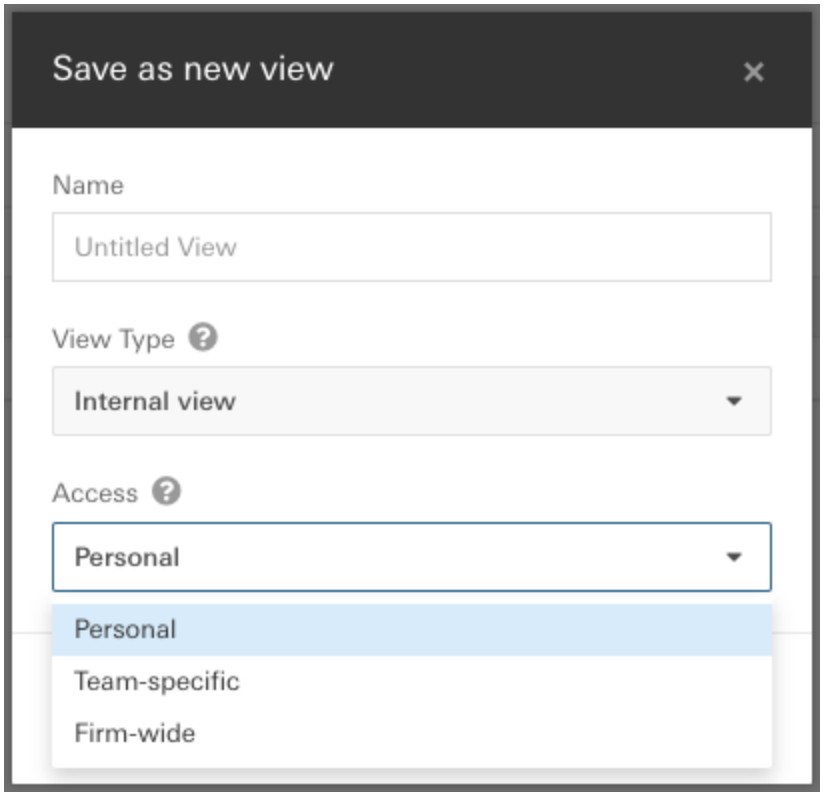
1. Select a view from the view dropdown menu.
2. Click the star next to the view dropdown button.

Access your favorite views by clicking **Favorites** in the view dropdown menu.

# Set a view as a team or firm view

If you have been added to a team in Addepar and have permission to manage team views, you can set a view as a team view. This is useful for maintaining views that are particularly relevant for your team, but may not be as necessary for other teams at your firm. Only your team and firm administrators can see your team's views.

You can also set a view as a firm view, accessible to any Addepar user at your firm.



1. After selecting or creating your view, click the ellipsis icon next to the view name and select **Save As...**.
2. Name the view and choose the view type
3. Under **Access**, select **Team-specific or Firm-wide.**

   1. If saving as a team view, select the appropriate team.
4. Click **Create**.

To delete a team view, click the ellipsis icon next to the view name and click **Delete**.

> ***Note:*** *Any team or firm views created by a removed user will still exist, but any personal views they created will be deleted. If you're planning to remove a user, it's recommended to have the user save their personal views as team or firm views first so that you can still access them later.*

# See row details

Double-click a row to display its details in the Information Panel.

The **Details** tab lists the attributes applied to both the entity and the position (how it's held). The **Summary Data** tab lists historical data uploaded for that row. The **Files** tab is only available for investments, and lists any files uploaded, like corporate action documents. The **Inspector** tab allows you to dig deeper into the transactions and data impacting the row.

# Download chart and table data

You can download chart data as a .csv file. This is useful when you want to access tooltips that aren't navigable by a keyboard. To download chart data:

1. Select a view.
2. Click on the chart's download icon. The file will automatically download to your computer.

ou can download table data as a Microsoft Excel (.xlsx) file. To download table data:

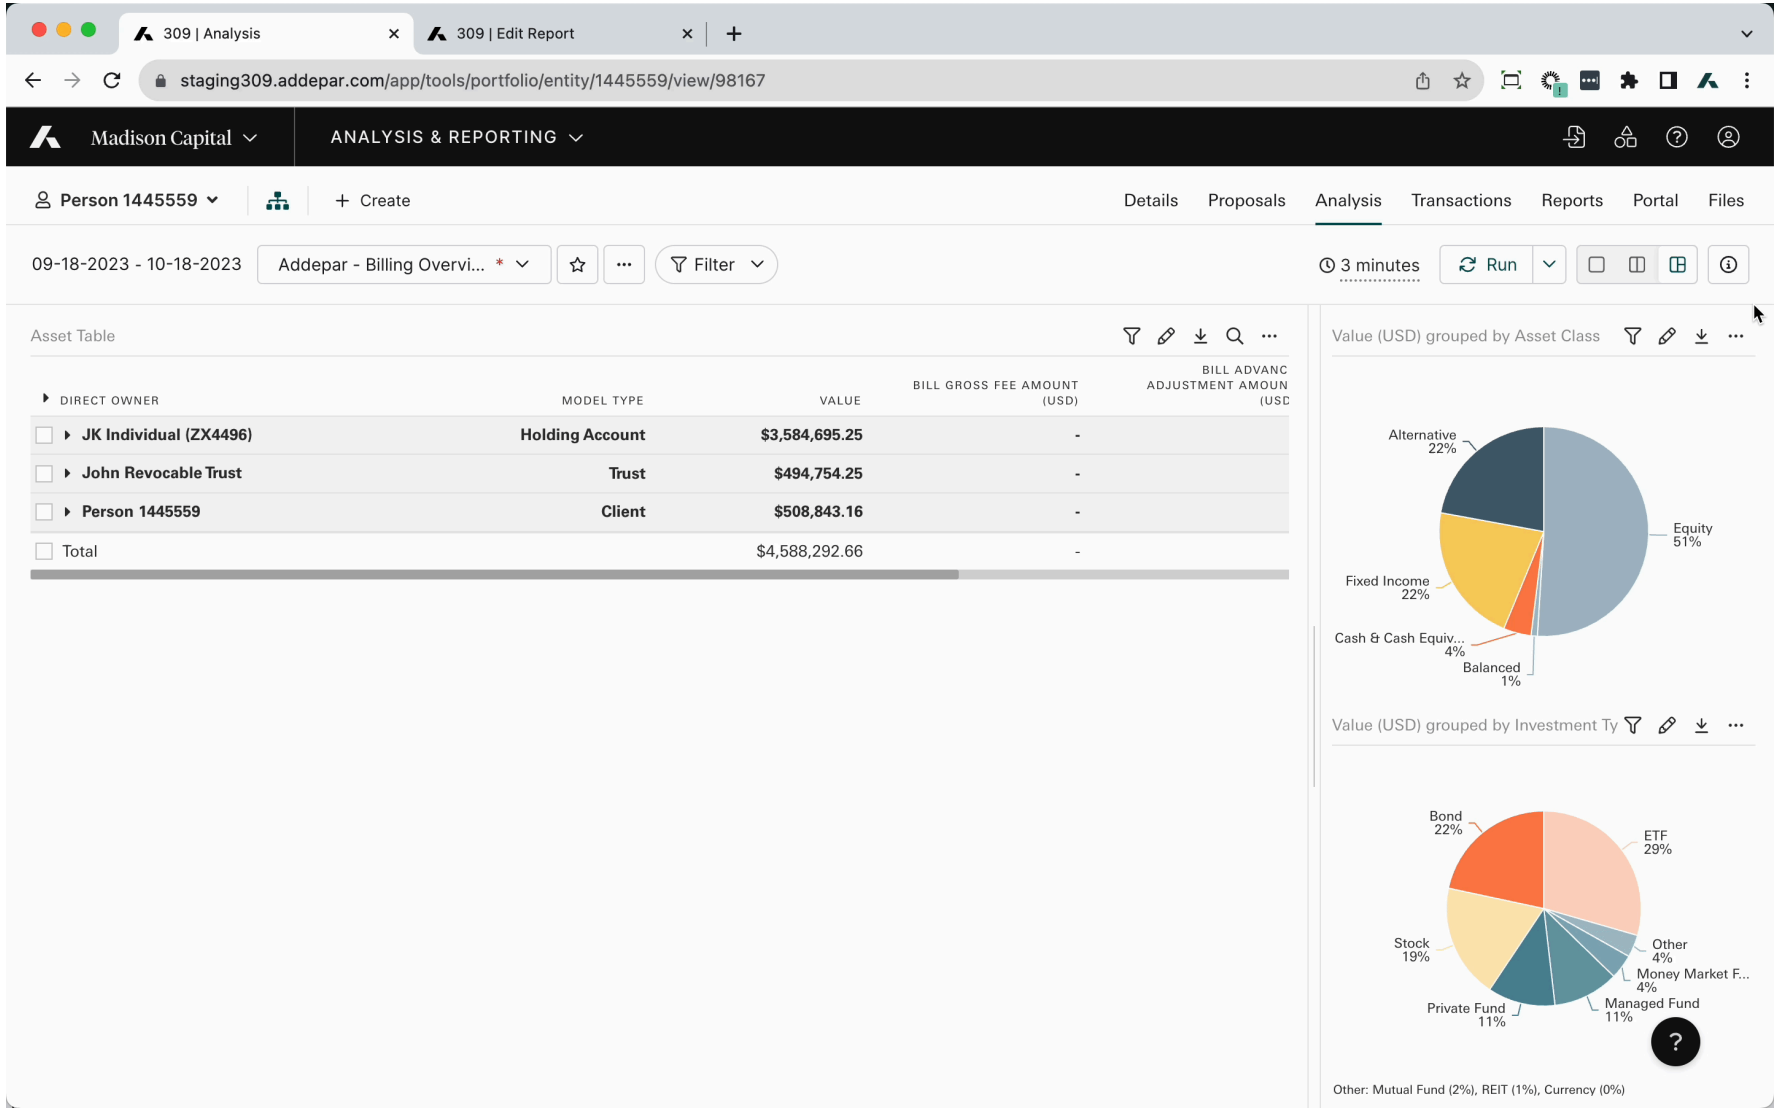
1. Select a view.
2. Click on the table's download icon. The file will automatically download to your computer.

# Copy and paste charts and tables

You can copy charts and tables from views and paste them into reports, and vice versa. This is useful when you want to quickly share content between the two products without recreating it.

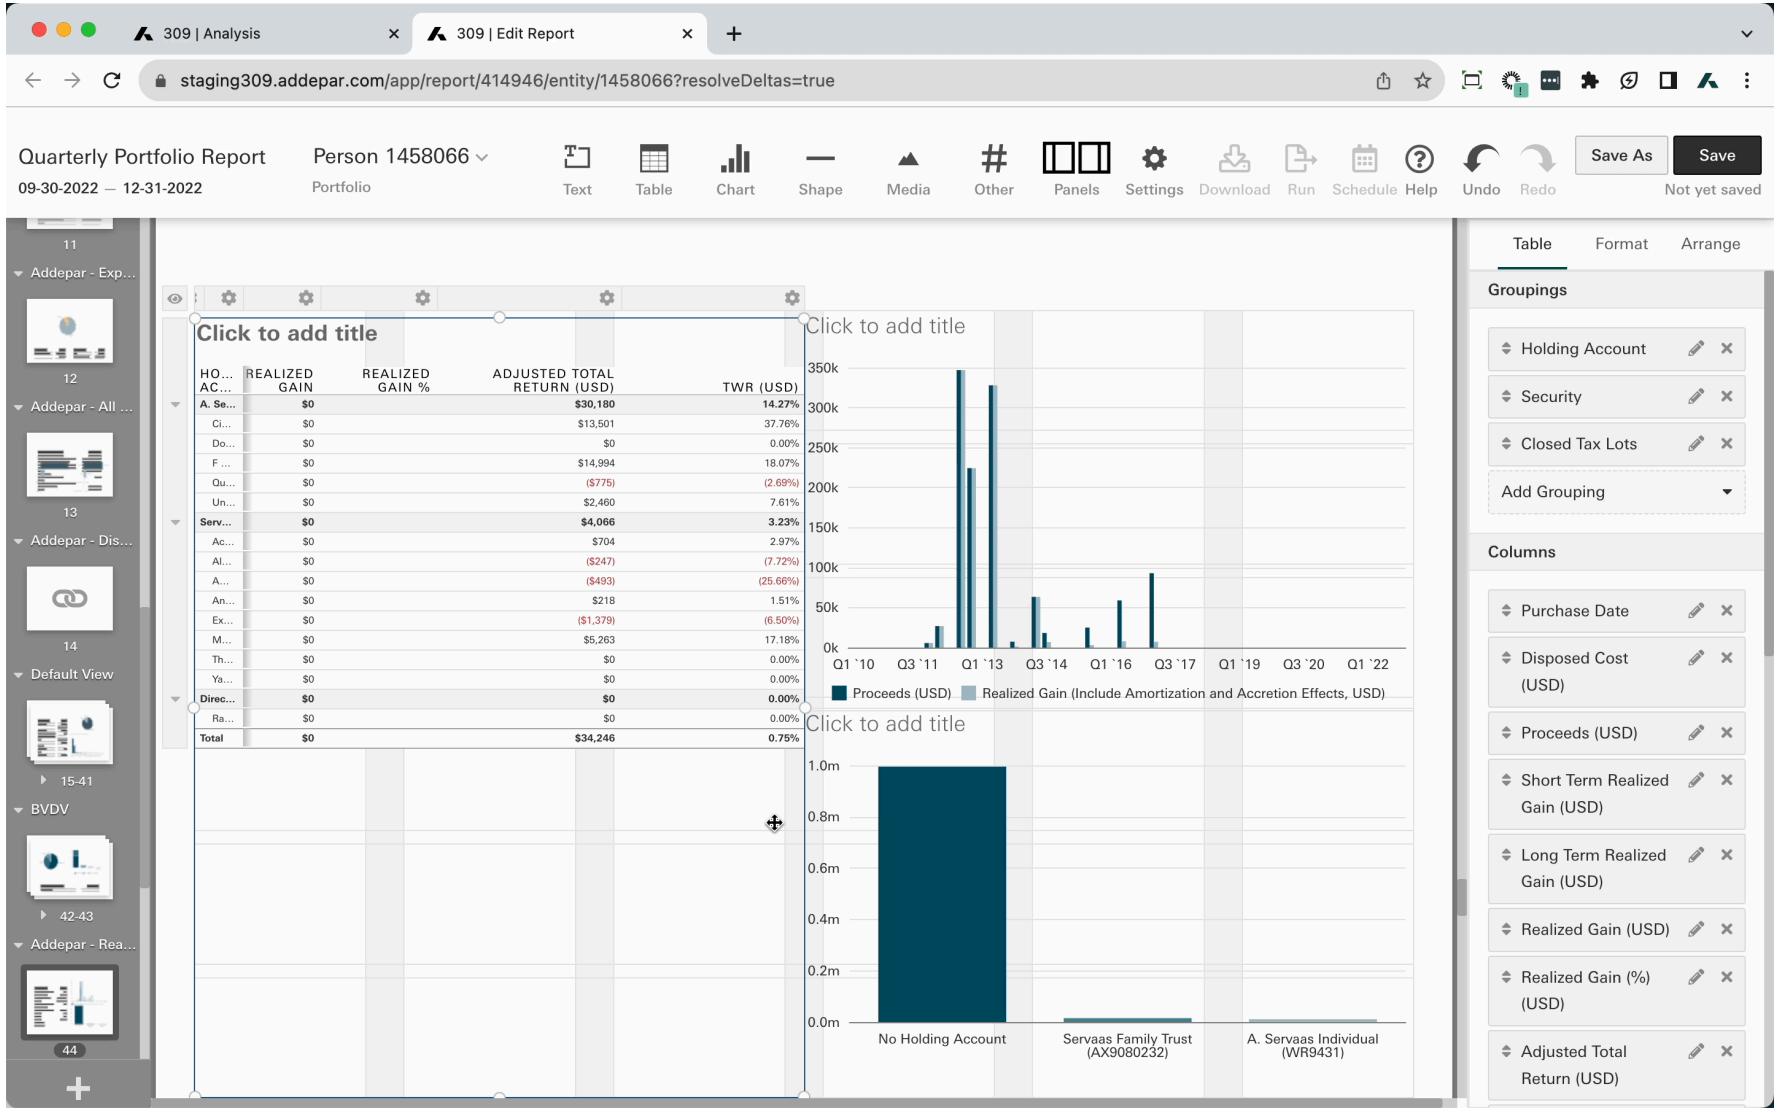
To copy from views and paste to reports:

1. Go to the chart or table.
2. Select **More** (ellipsis icon) > **Copy**.
3. Open the report.
4. Right-click on your mouse and select **Paste**. You can also paste using the keyboard shortcut ctrl/command + V.



To copy from reports and paste to views:

1. Right-click on the chart or table and select **Copy**. You can also copy using the keyboard shortcut ctrl/command + C.
2. Go to the analysis view.
3. Go to the chart or table you want to replace.
4. Select **More** (ellipsis icon) > **Paste**.



# Manage views

Navigate to **Firm Administration** > **Views** to see a list of all views you have permission to edit, broken out by category. From here, you can select one or more views, or all views in a category, and recategorize them in bulk.
